If the water stops flowing to your business, you'll want to protect against loss of production, loss of sales, and damage to revenue

Emergency planning and contingency planning

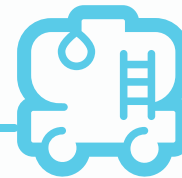

Our experts assess your water usage and what's needed in an emergency, to create a plan so you'll have the water you need, where you need it, if the supply stops.

Having no water supply to your premises may never happen, but it can and sometimes does.

It can bring your business to a grinding halt, stopping production or service, harming revenue and potentially resulting in penalties and reputational damage.

Don't rely on your water wholesaler

If there is a problem with the water supply, water wholesalers have a limited capacity to provide emergency water and have to give priority to vulnerable sites, like hospitals. If they can help, it's likely to be just water to drink.

We'll share our expertise in preparing contingency plans and support you with getting water to your business

● Emergency water supplies

This can be in response to an unplanned interruption, or a pre-planned event.

● Bulk water delivery

Deliveries of 10,000 to 30,000 litres of water to fill reservoirs, storage tanks, or to inject directly into your network.

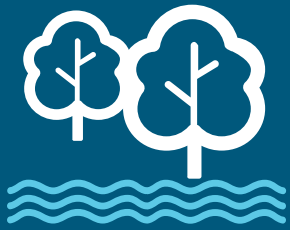

● Water storage

Static tanks with a capacity of 1,100 litres to 10,000 litres connected to your supply, or as standalone facilities, with quality-assured water and refilled and maintained as required.

● Bottled water

This can be supplied in large quantities and delivered wherever needed, on-site or for off-site events.

Alternative water supplies

An on-site, or near-site, water supply to your premises can reduce overall operating costs, with the benefit of a lower environmental impact.

Improved technology now means taking water from an alternative supply, treating it within regulations so it's fit for purpose up to drinking standards, is a viable option.

Water from rivers, and taken from aquifers underground via a borehole, cuts out the cost and environmental impact associated with the lengthy normal mains supply network.

Our experts in this field can investigate, report on and, where possible, develop alternative water to supply your premises.

Each business has different needs and solutions. Our expertise across businesses of all types and sizes means we will uniquely help you.

Water regulations and bylaws

Did you know that wholesalers can conduct planned and unplanned site surveys?

This means your water wholesaler can arrive at your site unannounced, to check your building complies with the latest regulations.

Our team of experts are armed with the knowledge and skills to make sure that your business is compliant.

With our support, you won't risk site closures or your water being disconnected after failed surveys.

What's more, even if your site has been inspected and found to be non-compliant, we can work with you to bring your business up to standard. We'll even self-certify the works done and ensure the wholesaler is happy with all work completed.

Legionella

We'll help to protect your business, customers and colleagues

Businesses are especially at risk of the legionella bacteria forming because of water being stored and transmitted.

This is why you're required by law to assess whether there's a risk of legionella contamination and to make sure you're meeting regulatory requirements.

We offer a range of products and services designed to prevent legionella bacteria being in your water system and to safeguard your business

1 Risk assessment

To identify areas to keep an eye on.

2 Log books

To keep on top of your safety checks.

3 Remedial tank works

To maintain your tank's tip top condition.

4 Dead-leg water system removal

To prevent water stagnating and bacteria growing in 'dead legs'.

5 Secondary disinfection systems

To keep your water as clean as possible.

Our experts will work with you to design and implement systems tailored to your exact business requirements. We'll make sure you're working in a safer and more cost efficient way with water.

**It all adds up to better
ways with water.**
